

# What's happening in our watershed?

## Watershed

A watershed is the area of land that catches rain and snow, and drains into a water body such as a stream, river or lake. Bear Creek watershed is the area of land South of I-70, east of Mount Evans and along Hwy 285. How we develop land and live in the watershed affects our water.

Bear Creek Watershed Association seeks to protect and restore water quality for many uses in Bear Creek Watershed through wastewater treatment plant review and drainage way stabilization projects.

### **How you can help:**

- Learn about your watershed and what BCWA does to protect our water.
- We would like to hear your concerns or questions about Bear Creek Watershed – or even a good fishing story.
- Attend a board meeting: Held on 2nd Wednesday of each month from 9:00-11:00 a.m. at the Evergreen Metropolitan District Offices (see [www.bearcreekwatershed.org](http://www.bearcreekwatershed.org)).
